

AMERICAN GOLDEN PLOVER

Coloring Page

American Golden-Plovers are a graceful, gold and black speckled shorebird. They also have a white stripe from the crown of their head to their neck. American Golden-Plovers eat insects such as flies, beetles, and snails. They lay 3 to 4 eggs and once they hatch the young birds find their own food. They migrate from Canada to South America. American Golden-Plovers make the longest migration journey of any shorebird.
