

# CHIPPING SPARROW

## Coloring Page

Chipping Sparrows have a bright brown crown on the top of their head, a black eyeline and are grayish underneath. Their wings are streaked dark and light brown with a wingbar. They are seen throughout the U.S. They can be seen in trees and grassy areas and like to make their homes in open woods, orchards and other farmlands. They mostly eat insects and seeds but will also eat grasses and other plant material. They make their nest in trees up to 15 feet high. They lay 2 to 7 eggs. They migrate short distances and some are permanent residents.
